## Conduction-cooled QCW Stacked Array

 QD-Q1yzz-A / QD-Q1yzz-B / QD-Q1yzz-BS / QD-Q1yzz-G / QD-Q1yzz-K
## DESCRIPTION

QD-Q1yzz-A, QD-Q1yzz-B, QD-Q1yzz-BS, QD-Q1yzz-G and QD-Q1yzzK are a variety of conductively cooled laser diode stacked arrays. These Stacks can be built from 1 to 19 diode bars of 60W QCW to 400W QCW. The laser diode bar arrays benefit from a fully mastered technology, with the appropriate design for improved efficiency and reliable operation.
Packaging and heat-sink have been optimized to reduce the overall thermal resistance. Assembly in a compact and rugged package, using AuSn hard solder, allows easy connection to a heat exchanger to get good thermal control.
This technology of stacks has been successfully submitted to specific environmental tests requested for Space missions (long life-tests, endurance under vacuum, irradiations...) with NASA or ESA.
These stacks are ideal for different applications under severe conditions: pumping rods or slabs solid state lasers, illuminators...for aerospace, industrial, space applications.
